

Problem Solving Component of the 2003 Nursery & Landscape CDE

The team will work as a group and submit one score sheet for the team. The students will be presented various situations of nursery and landscape plants, supplies, or practices where observation and analysis of the subject and resource materials are involved in a decision-making process. Example situations may include the following:

- According to the sample label provided, a spill of this chemical must be handled by _____?

- From the information provided on these catalog pages, one bag of the designated medium will fill ____ pots of the size and shape presented.

- According to the information provided, which plants in this list would likely need a protected site for winter survival in the Greenville area?

Participants will have 10 minutes to complete this phase. Each correct answer has a value of five points.
